Use-Case Name: Use-Case 3.0 Update User Account Info

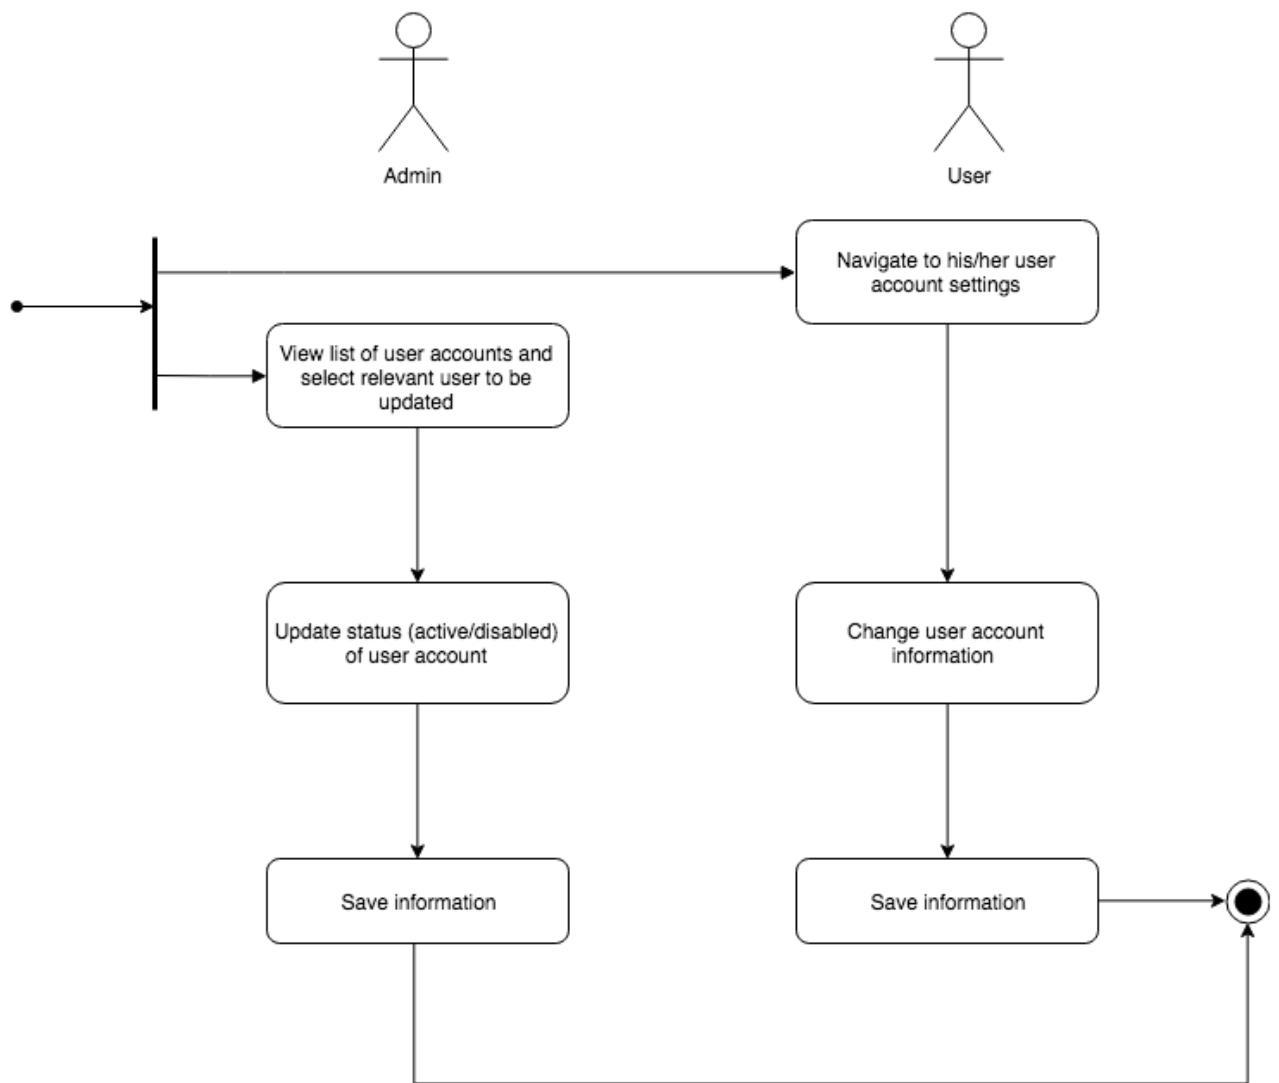

Description: General user can update their user account information. Updated information is useful for the “matchmaking” algorithm of the application and contacting the user. The only attribute that the admin can update is whether the account is still active or disabled.

Preconditions: For the Scenario: Administrator updates user account, the administrator must be logged into the system already.

Flow of Events:

<i>Scenario Name</i>	<i>Description</i>
Administrator updates user account	The system displays Update User screen where the administrator can select a certain user account to be updated. The admin selects the relevant user account and can only update the status (active/disabled) of the user. The admin clicks save and the system will update the user account information.
User updates his/her own user account	This use case begins when the user navigates to the settings of his/her account. The user can change their user account information such as their username, personal information, privacy level of their information, pictures, etc. The user clicks save and the system will update the user account information.

Activity Diagram of the Flow of Events:

Postcondition: NONE

Relationships: NONE

Special Requirements:
NONE
