**Use-Case Name:**   Use-Case 4.0 View User Account Info

Description: General user can view the information of other users. This is helpful for requesters to know the rating of their fulfillers, and vice versa. For the admin side, this is useful for deliberating complained users.

Preconditions: For the Scenario: Administrator view user account, the administrator must be logged into the system already.

Flow of Events:

Scenario Name	Description
Administrator views user account	The admin clicks a specific user account for viewing. The system will display view screen in which the admin can see all the details relevant to the user.
User views other user account	This use case begins when the user clicks a username in search results or requests/fulfillers pool. The user can view the public information relevant to his/her chosen user and the history of requests and fulfilled requests of the user (set to public).
